

INCOGNITO™

INTERCHANGEABLE BATTERY

THIN

REMOTE CONTROL

Divide and conquer. Although the Q5X remote control shows real time battery level, sometimes technicians prefer placing a fresh battery in the Incognito which has 3 battery sizes and run times of 4, 8 and 16 hours.

The battery is connected to the tiny transmitter body 1.8 in x 1.7 in x 0.4 in (4.7 cm x 4.3 cm x 1 cm) by a 6 inch (15 cm) cable that can be custom ordered for your application needs (can be up to 2 feet long (60cm)). This allows the transmitter to be mounted on the wearer while keeping the battery accessible to the technician.

A revolution in concealment; the ultra thin profile of the Incognito can be hidden anywhere. Typical hiding spots include undergarments or in almost any costume or stage prop making it ideal for use in theater, TV and film.

Because costuming often offers very little wiggle room and the comfort level of the talent can strongly impact the level of their performance, the Incognito was developed. The Incognito is encased in a soft smooth exterior making it extremely comfortable to wear as well as giving it the additional benefit of not picking, stretching or damaging clothing.

Paired with the [MicCommander™](#) remote control, the Incognito never has a need to reveal itself.

Remote control functionality allows audio technicians to monitor and control of all transmitter settings, and can be adjusted within a range of at least of 150 ft (45 m) in real time. The ability to turn the transmitter on and off or to put it in standby mode without ever touching the transmitter, can also extend the average battery life without disruption to your production.

Q5X®

Experience the magic of being heard, but not seen.
