

AQUAMic™

Now certified to 100 feet.

WATERPROOF

RUGGED

REMOTE CONTROL

Completely water/sweat proof, the AquaMic is the perfect solution if the talent may end up in water, sand, or mud.

Avoid the workaround of using condoms to protect your gear, and the further hassle when it is time to replace the batteries.

When paired with a certified waterproof mic, talent can be in and out of deep water without damage to the transmitter.

The AquaMic has two formats that are identical in every way except thickness and battery life: the AquaMic lasts 8 hours while the AquaMic L version has the longest battery life of 16 hours.

Down and dirty; fully protected against dirt and dust, the AquaMic isn't afraid to dig deep whether it's buried in the outfield for Major League Baseball, or riding surf waves, the AquaMic continues to exceed expectations everywhere.

Fully compatible with Shure Axient® Digital, the AquaMic has survived all the harsh treatment that has been thrown its way without compromise to crystal clear audio transmission.

As a popular transmitter for use in reality TV where water can happen, the remote control functions at up to 150 ft (45 m) which is critical on large outdoor sets.

The typical battery life can also be extended by using the [MicCommander™](#) to remotely putting the AquaMic in standby mode during idle periods of production.

Remote control functionality allows audio technicians to make on-the-fly adjustments to frequency and audio levels in real time; without ever touching the transmitter.

Q5X® IP68 certified waterproof up to 100 feet!
